

DESCRIPTION

Build Tower Game is a decentralized financial tool game on Binance Smart Chain network, which allows both passive and active investors to make money. In order to make a profit, users need to buy a construction permit before they can start building their own buildings, and each floor can be rented out and earned income.

GAME RULES

- The cost of obtaining the construction license is 0.025 BNB (~10\$);
- The higher the floor, the higher the cost;
- Only when all previous floors are activated can this floor be constructed;
- The built floor can be rented for 3 times, each time accounting for 74% of its cost, after which the floor will become unusable and need to be repaired;
- Users can reinforce the floor in advance without waiting for the lease to end

AFFILIATE PROGRAM

FINANCIAL FLOW UNDER THE HOOD

BTGT

BUILD TOWER GAME TOKEN (BTGT)

- a completely decentralized BEP-20 token.
Its total circulation will be in the liquidity
pool, and LP coins will be permanently frozen.

The smart contract of the game will buy back and
burn tokens from the pool on Pancake Swap, thus
increasing the token price with each purchase
of players.

The coin will have a practical use in
Phase II of the project.

SECURITY

SYSTEM SAFETY

The game is made in the form of smart contract in BSC network. Funds will not be stored in the smart contract, and all inflow funds will be distributed to users immediately according to the rules of the game. The interface to interact with the smart contract is the website, but it also eliminates the problem of DDoS attack, because the role of "data server" is performed by the smart chain, and the static files are distributed on the CDN network.

OPENNESS

OPENNESS PRINCIPLE

All smart contract codes will be verified and available to users for free. Any player who wants to make sure the code is consistent with the rules of the game can do it himself.
